Table of Contents:

1. Cup & String
2. 2-Way Radio
3. Amateur (Ham) Radio
4. Long Distance Wireless
5. Wireless Mesh
6. OpenGSM / OpenBTS
7. TV Whitespace
8. Sneakernet
9. Bluetooth
10. XMPP on LAN with mDNS
11.

METHOD: CUP & STRING

Explanation:

Connecting two cups with string, one person can speak into the cup while the other is listening (by holding the cup up to their ear). It works by the voice vibrating the bottom of the cup, which vibrates the string through to the other cup.

Method

1. Put a hole in the bottom of two paper cups.
2. Insert one end of the string through the bottom of the cup.
3. Tie that end of the string inside the cup.
4. Repeat on the other end.
5. When speaking into the cup, string must be tight.

METHOD: CUP & STRING

Cost:

2 cans or paper cups:

.25 cents

1 string: free to \$1

Good For:

Distances under 25m
that you can connect
with a string.

Surveillance Risks:

Unknown

Risks:

String can be cut.
